

HAWK-25%

HERBICIDE
EMULSIFIABLE CONCENTRATE

VAPCO

Class:
Hydroxybenzonitrile

A selective contact herbicide, used as post-emergence to control a wide range of annual broad-leaved weeds in onions, Garlic, Wheat And Barley.

COMPOSITION: Each Liter contains:

IOXYNIL OCTANOATE

25% W/V (A.I)

PROPERTIES:

HAWK-25%: Is a contact herbicide which penetrates through the leaves and translocated to the root and inhibits photosynthesis.

HAWK-25%: Control a wide range of weeds in Onion, Garlic, and field crops.

HAWK-25%: A selective herbicide with some systemic activity to control annual broad-leaved weeds.

HAWK-25%: Not toxic to bees.

HAWK-25%: Used to control annual broad-leaved weeds such as: Amaranthus, Pimpernel, Shepherd's purse, Goosefoot, Crown daisy, Fumitory, Heliotrope, Great henbit, Medick, Corn poppy, Prickly dock, Knotgrass, Thistle, Chickweed, Nettle.

USES AND APPLICATION RATE :

CROP	RATE OF APPLICATION	TIME OF APPLICATION
Onion, Garlic and Leek.	200-280 ml/donum	Form 3 leaf stage.
Wheat, Barley.	160-200 ml/donum	Form 3 leaf stage to stem elongation preferable during tillering stage.

CAUTION:

Used only on above mentioned crops.

Donum = 1000m²

REMARKS:

- Calibration of sprayer is important before application.
- Use high dosage rate for spraying when weed infestation is heavy.
- Do not use spray equipment contaminated with this product for other purposes unless thoroughly cleaned with water and detergent solution.
- In order to achieve maximum control of the targeted weeds, apply **HAWK-25%** to actively growing weeds. The weeds are best controlled between emergence and 3 true leave stage.

GRAZING RESTRICTIONS:

Do not graze or feed livestock forage cut from areas treated with **HAWK-25%**.

RE-ENTRY PERIOD:

48 hours after the last application.

COMPATIBILITY:

Compatible with many other herbicides, but incompatible with liquid fertilizers and water soluble formulations of 2,4-D.

*** OTHER TRADE NAME: HOCKS-25% EC.**
