COMPOSITION: Each ml contains:

Furosemide 50 mg

PROPERTIES:
- Potent diuretic with rapid onset action
- Increased Na and water excretion without loss of potassium.
- Effective even in cases of glomerular – infiltration impairment.

INDICATIONS:
- For cattle, equines, dogs, cats, pigs.
- Pathological oedema of the udder and perineum of the cow and mare at time of parturition.
- Preputial or scrotal oedema of male animals.
- Supportive treatment in the elimination of fluids in cases of ascites, hydrothorax, and bronchopneumonia, hydropericardium, from joints and tendon sheaths of bursae.
- Supportive treatment in laminitis, paralytic myoglobinuria of the horse.
- Protein deficiency oedema due to renal proteinuria, liver lesions caused by protein metabolism disorders, parasitic infestations or malnutrition seen as generalised skin oedema and ascites.
- Skin oedema due to blood vessels lesions of toxicity, trauma, allergy, inflammations, wounds, surgery.

DOSAGE: (By Intramuscular Or Slow Intravenous Injection)
- Equines: 5-10 ml once or twice daily with intervals of 6-8 hours.
- Cattle: 10 ml one time, or 5 ml twice with interval of 6-8 hours.
- Dogs, Cats: 0.25-0.5 ml/5 kg b.wt. once or twice daily with interval of 6-8 hours.
- Pigs: 1 ml/10 kg b.wt once or to be determined empirically.

SAFETY PERIOD: For meat and milk consumption: 2 days.

REMARKS:
- Not used in cases of renal failure with anuria, oliguria, acute glomerular nephritis, electrolytes deficiency disease or over dosage with digitalis.
- The therapeutic effect may be impaired by increased water intake.
- Diuresis may be enhanced with oral NaCL intake.
- In hypocalcaemic animals, tetany may occur.

STORAGE:
Keep in dry, dark place below 30 ºC

PACKING: (50,100) ML.
